

Tried & tested
tips 🥰

How to improve your

Programming

Logic </>

A big part of becoming a
better programmer,

Is to become better at solving problems. **Here is how:**

1

Think to solve

Split the problem into smaller pieces. Focus now on solving these tiny pieces

2

Read other's code

Next time you copy code from Stack-Overflow try to understand how the code you're copying works

3

Take pen and paper

None is clever enough to come up with the whole solution inside of their head. Write down and visualize

4

Learn Algorithm & DS

It will help you to get clearer understanding of how to solve problems efficiently

5

Learn Coding Paradigms

A paradigm is like a blueprint to follow to create projects. Also, to understand functional programming
